# Target Market Access

# Fuel Efficiency Projects

- Projects include installation of waste heat recovery units and ambient air vaporizers
  - Waste heat recovery utilizes waste heat from gas turbine generator exhaust to heat water for use in the submerged combustion vaporizers
  - Ambient air vaporizers reheat LNG without using fuel
- Proposed projects would result in fuel savings, which would allow for partial monetization of the 2% LNG retained
  - Savings depends on LNG throughput at the terminal
  - Savings will also depend on number of ambient air vaporizers that can be effectively installed
  - Estimated to save potentially 50-75% of the 2% LNG retainage
- Estimated project completions
  - Waste heat recovery: 2010
  - Ambient air vaporizers: 2010-2011

# Southern Trail Pipeline

- Provide Southeast markets with incremental transportation capacity accessing new and existing LNG gas supply in and around Louisiana; nearly 10 Bcf/d regas capacity by 2010
- Connect to new electric generation in Florida, with an estimated 1 Bcf/d of incremental demand

- Length:
  - ~ 350 miles
- Diameter:
  - Up to 42-inch segments
- Completed non-binding open season
- Pending Final Investment Decision
